

CBD Living Improves Product Packaging Design; Better Informs Consumers

New four-panel label design supplies more product information in easy-to-read format

CORONA, Calif. ? February 20, 2019 /[Canna Newswire](#)/ ? Global CBD manufacturer and distributor [CBD Living](#) today unveiled brand-new packaging for all 100+ of its products, designed to better inform shoppers on ingredients, dosage, usage suggestions and more.

The new label design provides a more in-depth view of the product without becoming too cluttered or overwhelming shoppers. The front panel better describes what the product is, as well as how many milligrams of nano-CBD can be found in each container. The right panel shows nutritional information, serving sizes and a full ingredients list. Easy-to-read circles show that all CBD Living products are THC-free and non-GMO. Additional circles designate which products are vegan, gluten-free or all-natural for easy product comparison. On the left, you'll find instructions for use, suggested dosage and FDA disclosures.

“CBD is becoming increasingly mainstream, but there are still a ton of people who need help deciding which CBD products - and brands - are right for them,” says CBD Living CEO and founder Bill DiSegna. “We hope that our new packaging provides useful information to shoppers, from dosage to ingredients, and allows them to make the best product purchase decision.”

CBD Living products are sold nationwide in over 5,000 stores. Click [here](#) to find a retail location near you. All products are also sold online, with free shipping to all US states on orders over \$115.

About CBD Living:

CBD Living is one of the fastest-growing global cannabidiol (CBD) manufacturers and distributors, with more than 100 products in 5,000 stores and shipping to consumers worldwide. CBD Living's prestigious in-house scientists use ultrasound waves to break down CBD into nanoparticles, allowing the CBD to pass through the blood membrane for enhanced absorption. This proprietary technique leads to up to 90 percent bioavailability, compared to 10-15 percent bioavailability when consumed in a traditional CBD product. From the original CBD Living Water product to CBD gummies, chocolates, freezes, tinctures, vapes, bath bombs and more, CBD Living is constantly innovating to bring the future of CBD to consumers today.
